Panasil® monophase Medium

HIGH FINAL HARDNESS

OUTSTANDINGLY HYDROPHILIC FROM THE VERY FIRST SECOND

As the contact angle measurement clearly confirms

(parameter for the hydrophilicity of a material)

Panasil® initial contact reaches the lowest contact angle after just three seconds compared to the competitor products mentioned.

The flatter the drop, the more pronounced the hydrophilicity of the material.

EXCELLENT HYDROPHILICITY

- **Panasil® immediately overcomes any residual moisture** on direct contact with the tooth surface and ensures a precise result.

- **Panasil® ensures sharply defined preparation margins** even in **extreme situations**, e.g. in the case of difficult hemostasis.
